A++

Harwich Lux free-hanging 90 cm in black for external motor is a classic hood with a large suction surface and adjustable light that ensures the right atmosphere and good working light

Thermex Harwich Lux is a distinctive and robust T-shaped free-hanging model with a horizontal design. The matt black Harwich Lux fits well into any modern kitchen, either as a contrast to light colors or in combination with darker colors on walls or kitchen elements.

What is completely unique about Harwich Lux is the large light plate that covers the bottom of the hood. When you activate the light in the hood, the bottom plate lights up with an indirect work light. You can both adjust the brightness with the dimmer function, but as something new, you can also set the color temperature of the light from cold to warm light. This means that it is possible to adjust the light exactly as you want.

The hood has edge suction, which means that you have a suction slot all the way around the bottom plate which effectively collects moisture from the cooking zone. Because of the edge suction, the air speed in the gap becomes higher and thus it is an incredibly effective suction technique.

By grasping the bottom plate, you can open up to the filter in the hood. The bottom plate is hinged at the rear edge and is held up with a magnetic bracket. It is only necessary to open it when cleaning the hood and its filters. The filter can be washed in a dishwasher, so cleaning can be done quickly.

Operation

The hood comes with a remote control where you can activate the hood's motor, set the suction power and activate the hood's light. The remote control is easy to store in your kitchen drawer, as with its compact design it is easy to store and operate with one hand.

In addition, the hood can be operated via the Thermex Remote app, which can be downloaded for free from the App Store and Google Play. In the app, it is possible to adjust the brightness, activate periodic extraction, get an indication for filter cleaning and adjust the color temperature of the light from warm to cold.
