Item number: 536.99.1816.9

€ 1.154,24

EAN: 5703347530074

### Recycle instead

When you do not have the opportunity to connect the kitchen fan to exhaust air or when you simply want to reduce energy costs, you can choose to recirculate the air via Plasmex® filters instead.

### PLASMEX® FILTER I with wall fitting

#### UNIVERSAL FILTER CONCEPT

When you do not have the opportunity to connect the kitchen hood to exhaust air or when you simply want to reduce energy costs, you can choose to recirculate the air via Plasmex® filters instead.

When the air from cooking passes through the Plasmex® filter, it is charged

the air molecules positively, which enables maximum absorption of

food. The filter also cleans the air from pollen, allergens, bacteria and mold spores. The process makes a Plasmex® twice as efficient like a traditional carbon filter. The life expectancy of a Plasmex® filters last about 10 years, this is about 20 times more than a traditional one carbon filter.

Plasmex® filter I is delivered in different packages depending on assembly.

With a wall fitting for mounting hidden behind the kitchen hood chimney (outlets for recirculating air needed), with studs for assembly

directly on the kitchen hood or for kitchen cabinet-integrated models

with mounting box for mounting in the top of the cabinet. Consult you

seller which suits you best.
