

Thermex Sensemex Indoor climate sensor

Item number: 536.99.5052.9

€ 227,83

EAN: 5703347965937

With the Sensemex indoor climate sensor, you can via the hood ensure a healthy indoor climate in the home 24/7

SENSEMEX INDOOR CLIMATE SENSOR

monitors the air quality on the following parameters:

- temperature
- moisture
- VOC (containing e.g. CO2 and formaldehyde)

The Sensemex indoor climate sensor can be placed anywhere in the home.

Should the indoor climate vary in relation to the general recommendation for a healthy indoor climate, the sensor reacts and wirelessly activates the hood's extraction until the quality of the air is again within the norm.

90% INDOOR

On average, we spend 80-90% of our lives indoors - and many of our homes are filled with dust mites, pollen, animal allergens, bacteria, chemicals, smoke, unwanted particles and bad smells. And even if we clean and air out, it's not always enough.

According to the Danish Environmental Protection Agency, this can result in an unhealthy indoor climate, and i.a. lead to asthma, allergies and other health problems such as fatigue, headaches and difficulty concentrating.

Therefore, the advice from the Danish Environmental Protection Agency is that you keep an eye on the indoor climate in your home so that it does not disturb your health.

The Sensemex indoor climate sensor helps ensure a healthy indoor climate.

The Thermex Sensemex indoor climate sensor works with all THERMEX VoiceLink hoods.
