

Heatvex Basic

Item number: 760.21.1000.2

€ 672,38

EAN: 5703347702563

Ventilates and recycles the heat 90% - with dust filter - with noise filter exit hole Ø100 mm - with humidity control - with remote control - covers up to 27m²

Ventilation in the home is necessary to avoid mould, fungus and rot, as well as to reduce the amount of radon gas. A bad indoor climate rhymes with fatigue, headaches, nausea and serious respiratory diseases.

Ventilation contributes to achieving a healthy indoor climate for the house's residents. The solution can consist of an ordinary fan that only draws the air out, or a central heat recovery system. It is often expensive to acquire and install, because valves must be set up and piping must be established in the home. A good and well-functioning alternative is decentralized ventilation with heat recovery – an effective solution for a better home with a healthy indoor climate. Good for the indoor climate in all rooms.

Thermex Heatvex is suitable for secondary rooms in the house – including bathrooms, bedrooms, cellars and storage rooms.

Thermex Heatvex is a decentralized fan with heat recovery that effectively ventilates your home around the clock. Thermex Heatvex alternately blows the air out and in through a heat exchanger, which absorbs heat when it is blown out and releases heat when it is blown in. Thereby you achieve balanced ventilation in your home with a healthier indoor climate, while saving money on reheating the replacement air. Thermex Heatvex is equipped with a dust filter that captures particles from the outside and a moisture sensor that regulates the suction power itself depending on the need. Thermex Heatvex is controlled by remote control.
