

Central Gemini IV, 600 mm, white

Item number: 530.41.5044.2

€ 551,41

EAN: 5703347532405

Thermex Central Gemini IV 60 cm in white with switch is one of the market's most price-friendly pull-out hoods for central ventilation and installation in overhead cabinets. The design of the hood provides maximum absorption with a minimum of air flow.

The Thermex Central Gemini IV is the latest new model in our popular Gemini series. The hood is intended for central ventilation. This means that the hood has a metal flap that can be opened and closed via the hood's controls, and therefore not a motor like on a traditional hood. When the damper opens, the extraction from the hood via the building's ventilation system is increased.

Gemini IV is designed as a pull-out hood, which has the advantage of covering a larger area than e.g. a built-in model. At the same time, this means that the hood's absorption rate is improved. And when you are not cooking, you can push the extractor in and only the hood's front strip is visible under the cabinet.

The new damper in the hood is the difference from previous versions. Here, great emphasis has been placed on the damper opening being as large as possible to ensure the lowest possible pressure drop. This means that less demands can be placed on the ventilation system compared to before. The larger the opening, the less pressure above the damper is required by the ventilation system. In addition, it is also possible to close the damper completely. The Gemini IV damper is now powered by an electric motor, so compared to previous versions, the hood's damper opens much faster.

There is a built-in switch (trigger/potential free contact set) in Gemini IV. It is a function that allows the hood to notify the ventilation system that the hood is in operation.

The hood's filters are easily removed when cleaning the hood. The filters can be washed in a dishwasher.

Operation

The hood's operation is very simple. When you pull out the extractor, you will find an on/off button for the hood's lighting on the left side. And on the right side you will also find an on/off button for the hood's damper. In addition, there is a built-in
