

Sirocco II

Item number: 525.46.1282.2

€ 3.629,04

EAN: 5703347533235

A++

Sirocco II is a compact induction hob with a built-in extractor hood. The hob is elegant and sleek, offering a double bridge function and square cooking zones. The innovative filtering system ensures effective filtration and makes cleaning the extractor hood easy. Documented odour extraction rate over 75%.

The **Sirocco II from Thermex** is an elegant induction hob with an integrated extractor hood. The hob's design is extremely simple, making it suitable for any kitchen. The advantages of an integrated extractor hood are many, but the most obvious one is that you don't need to have a traditional hood hanging over the hob. This is especially relevant if you choose a kitchen solution with a kitchen island.

Despite having an integrated extraction motor in the hob, it doesn't take up much space in the kitchen cabinet. The height of the hob is only 23 cm, which means there is plenty of space for drawers or similar storage under the Sirocco II.

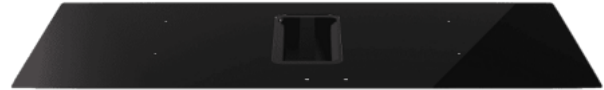

The control panel of the hob is intuitive and straightforward. You control both the hob and the extractor hood with the same sliding glass touch control. The controls on the Sirocco II light up in white when activated.

Induction Hob

The Sirocco II is packed with practical features that make cooking easier. The hob, equipped with 4 large square zones, has a double bridge function, allowing you to make full use of the entire hob when using your extra-large pots and pans. This means that if one cooking zone, measuring 210x190 mm, is too small, you can easily combine 2 zones into one large zone, giving you a massive zone measuring 210x390 mm. And you can choose to do this on both sides if necessary.

The **Heat-up function** sets the cooking zone to the highest level to quickly bring the pot to the desired temperature. Then, the cooking zone returns to the previous setting.

The **Keep-warm function** on the hob is another practical feature. When activated, the hob ensures that the cooking zone maintains a temperature to keep the food ready for serving, while also preventing it from burning. This allows you to concentrate on preparing the rest of the meal.
